Dear Recruitment Team,

I am Olayeni Gbenga Taofeek. 19 Years Old Software Developer, User Interface, and User Experience designer.

Why did I start learning Web Development? growing up as a kid I do dream big having a lot of thoughts like I want to build games, apps and etc then I can be like when I grow I want to build an app whereby people will be able to use their left earphone to listen to music then the right one for something else. a lot of stuff like that However when I was 16 years old I started learning how to code That's how I started learning web development online by watching Tutorials video on Youtube and making research on Google

I first learn JavaScript a bit then how to build a WordPress site by using drag and drop to create world-class web apps then I started learning HTML 5, and CSS3, to code a static site however I heard about Bootstrap a CSS framework I learn that and I built a lot of project with that then I move back to supercharge my WordPress by learning how to build a custom WordPress theme that when I learned PHP, WordPress Hooks, Custom Post Type, Woocommerce, Advanced Custom Field to make the WP site dynamic. I started learning React JS to build SPA sites Yes there's a way we build websites with WordPress but things got different here when we start using "Props, WebHooks, Router" and a lot of stuff like that in React JS then I keep on moving to MERN stack x Web 3.0 FullStack Developer I won't say WAMP is better than MERN I am not the type of person that does comparison over someone hard work project hahaha but all I can say is I am a problem solver, a creative person, a fast thinker, I have passion for learning new technologies and making the earth a better place for us to live one day.

Why I am the right fit for the job? Over the years, I have acquired relevant skills and experience, which I shall bring to your organization. I'm pretty confident that I am the best candidate for this job role.
It's not just my background in the past projects, but also my people skills, which will be applicable in this position.
On the other hand, I am a self-motivated person and I try to exceed my superior's expectations with high-quality work. Being a fast learner, I quickly learn concepts and apply them to other problems.
Lastly, all these skills put together make me a complete package for this job.

Salary is not first priority for me. I will like to continue my career and I also want to improve my knowledge and skills by working with the team learning from each other gain experience so I expect a considerable salary according to my ability & your company's norms which will fulfill my economical needs.

Currently, I don't have a UK work Visa but I am gathering documents to apply for Global Talent Visa. Fragomen told me if I can get a Recommendation(reference) letter from a UK Tech Company it will strengthen my visa application. If I can get a letter/Sponspoship from you it will boost my career a lot.
I am looking for a Visa Sponsorship/ Remote/ Contract/Freelance job whereby I'll be able to work as a contractor for the company and use my savings to Apply for Visa, Sponsor myself for Visa Fee, Flight, Accommodation and all

I like being held responsible for my professional because if I'm not good at it, is like me not being productive for myself.
I hope to hear from you soon

Kind Regards,

Gbenga
